

DAVID VEGA

Projects

PokeDex

Github Source Code

Application

- A web application that retrieves data from the Pokemon API asynchronously with fetch and promises
- The array list of pokemon is loaded and displayed within buttons, when clicked displays a modal of specific information about the pokemon
- Bootstrap was used for the user interface and styling of the web application

indieFix Rest API

Github Source Code

- Utilized Node.js to build the server/route paths that store information about indie movies, directors, and genres
- Designed and built non rational users and database schema
- Leveraging React to design and develop the client front end

Experience

Web Designer/Google Analytics

SUPER PURPOSES | SEPT 2020 TO JAN 2021

- Planned the web design process and designer tools to visually structure the process for a web design project
- Launched our promotional campaign page to increase company branding and revenue
- Collected data from Google Analytics for improvements

Software Test Engineer

CERENCE | JAN 2020 TO APR 2020

- Examined software across various OS platforms
- Diagnosed and resolved software defects
- Formulated and updated software documentation
- Maintained and troubleshooted testing equipment

Merchandise Execution

THE HOME DEPOT | DEC 2016 TO MAY 2019

- Completed projects within the project scope time allotted
- Reset aisles and bays to updated planograms
- Merchandised new and restocked products into bays
- Assisted customers with products and product knowledge
